Cash4Clamps

Reasons to upgrade now to the new TightSight® Clamp Meters

The new generation, top-of-the-line, feature-rich TightSight® Clamps are built with pro quality to withstand the tough use in commercial and industrial environments.

- **Rugged Case and Dial Construction** – Withstands repeated heavy-gloved use
- **True RMS** feature accurately measures voltage and current on electrical circuits and equipment
- **High Frequency Rejection (HFR)** feature provides reliable voltage measurements in electrically noisy environments
- **Frequency** measured via the clamp jaw or with the test leads
- Extensive **shielding** provides Electro-Magnetic Interference (EMI) immunity to obtain consistent readings
- **Peak hold** for sizing fusing protection and checking motor startup current
- **Ergonomically designed** for use with PPE. Large display buttons with Peak/Data Hold located conveniently on the side of the clamp
- **Exclusive TightSight® bottom display** for reading from virtually any angle and safely from an arm's length away
- **Super-Bright Backlight** with large numbers and symbols for easy viewing in dark, bright or tight locations
- **Confidence in Battery Power for Accurate Readings** – the low battery icon indicates approximately one hour of operation remaining, then the unit displays “bAtt” and shuts off to prevent inaccurate readings
- **Retains Calibration** – software offsets replace calibration pots that are prone to movement
- The display has an expanded **operating range** of -4F to 158F (-20C to 70C)
- **U.L. Listed** to Cat IV 600V/Cat III 1000V for making measurements safely in commercial and industrial environments.
- See the IDEAL Commercial/Industrial **TightSight® Clamp Meter sell sheet** for more features and specifications
